Stroke a leading cause of neurological disability in the world, is the third major reason of mortality behind cancer and heart disease, that it is epidemic emerging worldwide, especially in the low and middle income countries. Most of the patients who are survived from stroke are not treated completely and have life with disability and complications preclude a poor outcome. Therefore, it is necessary that medical students be trained and educate in a standardized manner, through focused lectures, interactive workshops, and bedside teaching sessions in the way of dealing and correctly managing of prevalent and potentially disabling neurological emergencies, such as stroke.

Key words: stroke, patients, neurological emergencies
